

ABSTRACT OF THE DISCLOSURE

The invention provides systems, methods, and computer programs for fulfilling
5 requests from users wanting current information related to legal or other topics
designated by the users from lists of available topics. Information related to available
topics is classified by type, and at least two types of information related to the
designated topic(s) and/or type(s) are provided to the user. Optionally the information,
when provided, is displayed on a computer display, or provided in other physical or
10 electronic form, and is sorted according to the type or class of information to which the
information belongs. The invention also provides for the gathering and making
available of such information, and for the automatic updating of information in the
selected legal or other professional topic(s) without intervention by the user on a
periodic and/or continual basis.
